Design and Fabrication Services

Tega Australia Losugen provides a complete solution to its customers from the process of identification of client needs to the design, fabrication, quality inspection and dispatch of the product with detailed packing instructions.

Wear liners and protection systems are individually designed and custom manufactured to provide the optimal performance and longevity for client applications. Losugen provides a customised, in-house professional design and manufacture service and has built a reputation for delivering quality products and services to both national and international markets.

Design and Fabrication Service Benefits:

- Extensive capability and technical application in product design and development
- Regular visits, audits and inspections to discuss wear liners, problems and solutions
- Liner improvements
- On-site support
- Complete wear protection systems including design, manufacture, installation and ongoing performance monitoring

PARTNERSHIPS IN PRACTICE

Losugen

Installation and Maintenance Services

Both TEGA and Losugen offer clients an end-to-end service for both installation or installation supervision, scheduled maintenance and servicing of all its liners, screens and conveyor components.

Our responsive service means our team of highly experienced personnel can be dispatched to client sites as part of scheduled maintenance, with parts and tools located on client sites, or, for ad-hoc servicing to keep our client’s productivity optimised.

In addition to this, we also offer optimisation audits for mills, screens, transfer chutes, conveyor systems and hydrocyclones mineral beneficiation.

Refurbishing and Rubber lining

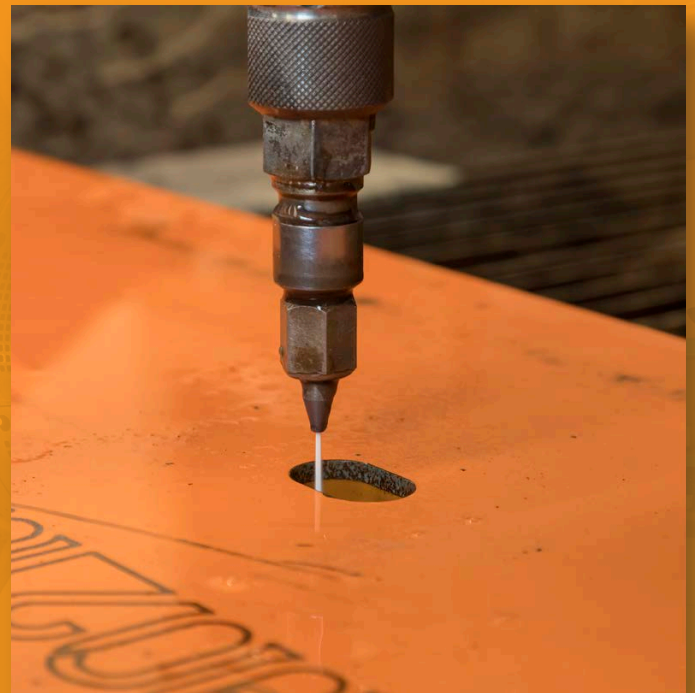

Tega provides high-quality lining material systems to the resource and infrastructure sectors. Our goal is to provide efficient lining systems across rubber, ceramics and associated linings – with a capability of extending to custom fabricated rubber products, supply of sheet rubber, blasting, PVC piping and painting services.

The typical application of our products and services are implemented in the lining and coating of chemical and process equipment, linings for abrasion and wear resistance, roller, pulley and custom fabrications.

Water Cutting Services

Tega provides an industry competitive water jet cutting service delivering exceptional precision with intricate shapes quickly cut to within +/-0.25mm. The water jet cutting service, using fine abrasive jets at ultra-high pressure, means a wide range of products can be cold cut accurately without damage to temperature sensitive materials.
